Imaging Study of 11 to 18 Year olds with Head Injury

Ethics Approval Reference: 24/SC/0155

Are you 11-18 years old?

We are looking for **healthy volunteers** to take part in our study!

What is the purpose of the study?

Head injuries are common in young people. While most recover well afterwards, some feel worse than expected. Currently, we don't know why this happens. This study could help us predict how well someone will recover after a head injury.

What does the study involve?

We will ask you to attend **2 visits** at the **FMRIB centre** in **John Radcliffe Hospital**. The visits will take place **6 months apart**, and will each last around **2 hours**.

Both visits will involve:

- A magnetic resonance imaging (MRI) brain scan
- Questionnaires
- Short tasks
- Height & weight measurements

Who can take part?

We are looking for young people who:

- ✓ are 11 to 18 years old
- ✓ are fit and healthy
- ✓ and take part in sports

Unfortunately, you will not be able to take part if any of the following apply:

- Currently recovering from a head injury
- Ever diagnosed with a neurological or psychiatric condition
- Unsafe to be around a strong magnet
- Previous head surgery
