

# Participants wanted for a brain stimulation study!

## ***Using non-invasive brain stimulation to investigate speech production***

Researchers at the Department of Experimental Psychology (University of Oxford) are seeking healthy volunteers **aged 18-50** for a safe and non-invasive **Transcranial Alternating Current Stimulation** study.

The aim of the study is to investigate how the brain learns and integrates speech motor skills. Transcranial alternating current stimulation involves the delivery of a low current to the brain via electrodes on the scalp.

This study involves **one visit** to the **Anna Watts Building** (at the Radcliffe Observatory Quarter). The entire session will take approximately **one hour**.

**Volunteers will be reimbursed for their time!**

If you are interested in participating in this study and/or would like further information, please contact Birtan Demirel at [birtan.demirel@psy.ox.ac.uk](mailto:birtan.demirel@psy.ox.ac.uk).

# Thank you for your time!
